DISINFECTION

REASONS FOR ACQUISITION OF DISINFECTION STAND

HOW IS CORONAVIRUS BEING SPREAD?

Coronavirus is transmitted from person to person through close contact. This is a so-called droplet infection, which is transmitted through the air. The most common ways in which the virus enters the human body are the mucous membranes, ie the mouth, nose and also the eyes. We unknowingly touch our faces almost constantly. Hands must therefore be washed and disinfected regularly. At the same time also avoid touching the face as much as possible.

HOW TO PROTECT YOURSELF?

Protect yourself and others by following these basic rules:

- Avoid obviously ill people
- Obey basic hygiene rules
- Use disinfectant when in contact with people outside your household
- Use protective equipment - veils, respirators, protective gear, goggles, gloves
- Disinfect equipment that comes in contact with more people

BENEFITS OF DISINFECTION STAND

PRODUCT DESCRIPTION

This **Czech product** is made of quality steel. It consists of a base, a rod, a dispenser holder and a storage or drip surface. The surface of the entire stand is treated with powder coating. This guarantees not only a **long service life**, but also **the resistance of the material** during frequent usage of disinfectants.

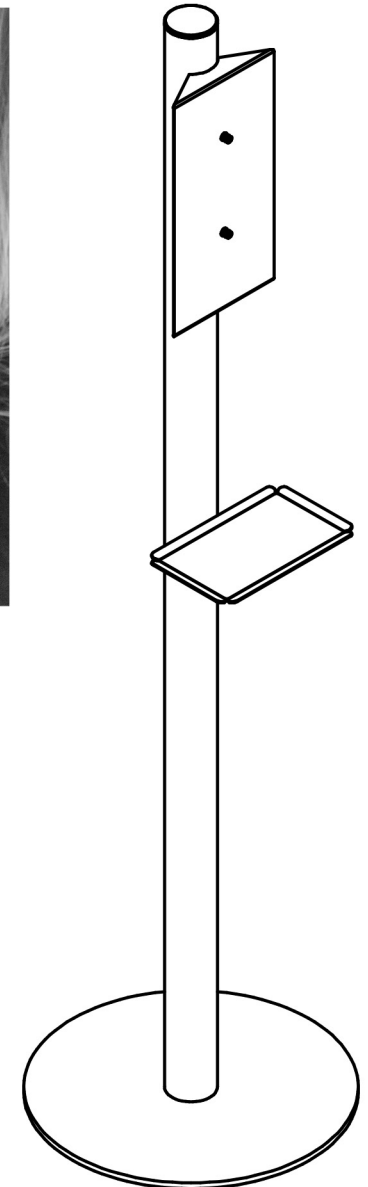

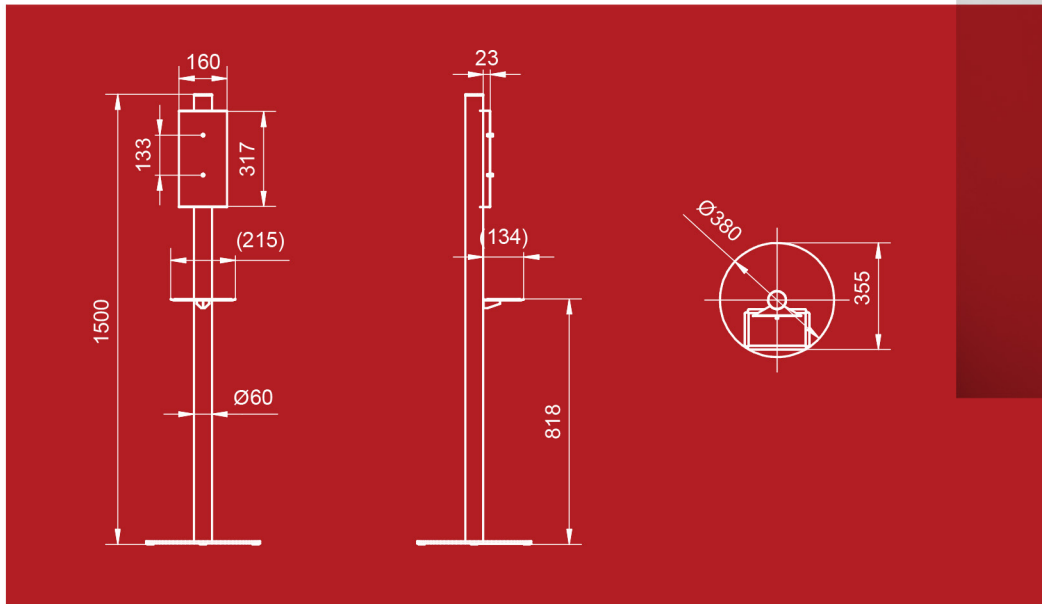

Any touch free disinfectant dispenser can be placed on the stand, however must be ordered separately.

By placing the stand, you will remind yourself of the importance of proper compliance with hygiene rules. At the same time, you will place a disinfectant gel comfortably within reach of all people moving in your premises.

DISINFECTION STAND PARAMETERS

TECHNICAL PARAMETERS

- Made of steel
- Surface treatment powder coating
- The total height of the stand is 1500 mm, the diameter of the tube is 60 mm
- Weight 14 kg
- The diameter of the base is 380 mm and its height is 10 mm
